**Description:** SnippCheck is all about processing & analyzing the end users data from their receipts which they upload via websites or other modes of submissions. We grab minute details from their receipts to handle the prize distribution & to check for their eligibility. This platform also provide access to different functionality to mark any receipt as Valid or Invalid based on criteria of Item purchased or total amount of purchase or any retailer specific eligibility.

**Responsibilities:**

- Tasks ranging from creating stored procedures to developing web forms, and eventually unit testing of the developed unit& module.
- Tortoise SVN has been used for versioning and Check-in/Check-out.
- Delivering and implementing the project as per scheduled milestones for enhance functionality.
- Doing release on various test and user environment (live) servers.

**Environment:** ASP.NET, C#, Visual Studio 2015, SQL Server 2012 R2, JavaScript, HTML

**Megasys India Pvt. Ltd.**

**Mar'13 - Oct'15**

**3. Project: im3**

**Client:** Reefer Service Inc., Scott Truck and Services, Decleene Services,  
Carrier Detroit Transicold, MultiMarine, South West Diesel

**Description:** The strategic aim of the application was to provide an end to end solution for product vendors and manufacturers to maintain their inventory and accept orders from e-commerce sites and provide service & maintenance to customers. The application maintains management on a single platform and also communicates with Sales force and Big Commerce via SOAP web services to fetch order information. It contains big modules like Inventory, Equipment, Purchase order, Sales order, Work order, vendor, customer which are integrated to each other through n-tier architecture to meet the business requirements. Graphically represents and plans inventory to meet maintenance demand, making right inventory available at the right location when needed. Application also integrates Quick Book for accounting purposes along with USPS, UPS. Application also provides various RDLC reports for each module to analyze and view the business growth.

**Responsibilities:**

- Engaged in development of new screens, making changes on existing screens, solving defects and unit testing.

- Making and altering database tables, Stored Procedures, Views for business needs.
- Involved in Stored Procedures, view optimizations for better and faster output.
- Single handedly involvement in making Purchase Order module to support services for Seller & Vendor both.
- Designed and developed Work Order Scheduling to schedule work order and employees to particular task which include drag and drop functionality on day, week or a Month calendar view.
- Engaged in Integrated Inventory management module as per business needs.
- Engaged in developing of Sales Order module which handles and maintains order received by an organization from a customer or order created internally by a client and make inventory available to them on time.
- Engaged in Single handedly Integration of USPS and UPS services in the application to print shipping labels according to billing and shipping addresses.
- Integrated various third-party API's such as Big Commerce, Salesforce API for loading customer details and their Orders.
- Worked on QuickBooks online for adding customers, Invoices in QuickBooks. Also, successfully generated IIF files (QB files) for uploading in QB.
- Delivered features with agile methodology.
- Deployment of application on UAT and Production Server and Unit Testing.

**Environment:** Visual Studio 2010/2012, MS SQL Server 2008 R2/2012

**Technology Used:** VB.NET, SQL, JavaScript, jQuery, HTML

#### 4. Project: EWIE

**Client:** EWIE

**Mar'12 to Feb'13**

**Description:** EWIE is all about tool and chemicals management and its inventory management. This is enterprise level Chemical Inventory and Warehouse Management System web application that unifies comprehensive asset life cycle and maintenance management on a single platform and follows oops concepts. It includes modules like ACD, Vendor Maintenance, Vendor Visit, Cost Savings, Analyst Dashboard, Quote Tracker, Inventory Tracker and SQDCME that are linked together to form an n-tier enterprise web application. This asset management software provides insight for all your enterprise assets, their conditions and work processes, for better planning and control. Manages asset deployment, specifications, monitoring and calibration, costing and tracking from a single system. The objective of these solutions is to reduce customers Total Cost while increasing customer satisfaction.

Also Ewie-ODIN is all about Purchase Order and Sales Order Portal wherein details of Purchase and Sale are entered.

#### **Responsibilities:**

- Tasks ranging from creating stored procedures to developing web forms, and eventually unit testing of the developed unit.
- VSS has been used for versioning and Check-in/Check-out.
- Delivering and implementing the project as per scheduled milestones.
- Doing release on various test and user environment (live) servers.

**Environment:** ASP.NET (VB), C#, Visual Studio 2010, SQL Server 2008 R2, JavaScript, HTML, jQuery
