Education)

ACADEMIC PROJECTS

Android app to develop Time table

Description: The App is developed in android and the main objective of the app is to generate Timetable and generate .pdf file for it so that it can be shared. User can perform CRUD(Create,Read,Update and Delete) operations. The app uses sqllite database which is lightweight and suitable for mobile phones.

PROFESSIONAL PROJECTS

Scheduler

Description: Main objective of scheduler is to process data on daily or Developed completely in java and SQL . In this generally scheduler used to fetch data and insert or update that data which then that data used to reflect on portal.

Web Portal

Description: Main objective of portal is to automate process of sales force. Instead of taking order on paper user uses application to register order for retailer once order is registered it is submitted to respective distributor and then distributor dispatches order for the same . Using portal user can perform various functions like create new retailer , align retailers , extend retailer etc. The portal is also used by various users like ASM , BM , ADMIN etc. Admin uses portal to provide access to various levels of users.The project is developed using mainly spring , hibernate .
