PROJECT

B.E. Project.	
Title	‘Data Security By Location Based Encryption for Banking Application’
Tools & Technologies.	Eclipse mars2, SQL
Size	3
Role	Acted as a Team Leader and Developer
Description:	
General Overview:	
<p>In this project we developed an android application for providing Security to Banking System. In this, User need to enter the OTP which is send on Mobile number and Encryption key which is generated on email-id along with the TD(Tolerance Distance). TD is nothing but within how much distance user could able to do his/her transaction. So that our system provides security to do transaction within that distance only. If user try to do transaction beyond that TD region then it will not possible.</p> <p>In this, we provide the security in case of physical attack also. If anyone tries to force the user to do transaction in their account, then user able to do the same transaction process by entering the wrong password like the own password with any extra digit added into it. So that the transaction goes to the dummy server.</p>
